MULTIMEDIA PROJECTS

- “Venice oil field,” *digital* June 2024
This piece transforms fragments of ocean microplastic, gathered from the very beaches where industrialists extracted and accumulated oil in Los Angeles, into a vibrant yet unsettling composition. Bound together by raw oil globs, these spiraling plastics reflect the temporal cycle of hydrocarbons, born from ancient fossilized matter, consumed in the present, and destined to endure indefinitely.
- “Global intimacies,” *mixed media sculpture* May 2024
This sculpture reflects on the intimate connections that bind us, both physically and emotionally, and the omnipresent influence of plastic in our modern existence. Through its form, the sculpture invites contemplation on the interwoven themes of social reproduction, highlighting the traces of plastic that permeate our bodies and our relationships.
- “Resilience resurfaced: Tides of the Nakba,” *ceramic sculpture* Mar. 2024
This piece emerges from the shores of Midron Yaffo Park, once the ‘Ajami municipal landfill and now home to the haunting remnants of Palestinian homes demolished during the Nakba. These fragments bear witness to histories of displacement and loss, washed ashore alongside plastic waste and Gazan humanitarian aid.
- “Pre-exposure prophylaxis,” *mixed media sculpture* June 2023
A Truvada container reborn, brimming with a kaleidoscope of microplastic fragments. Each piece is meant to be offered to a patient in the OCD Intensive Treatment Program as a pre-exposure (therapy) prophylaxis to remember how chaos intertwines with resilience.
- “Fossil futures,” *furniture series* Jan. – May 2023
This furniture series weaves vibrant hues of epoxy and ocean microplastics from Los Angeles beaches into a material of deep geological time. Each piece—made of epoxy as a forever chemical and microplastics as persistent pollutants embodies the entanglement of labor, industry, and ecological impact, reflecting the imprint of fossil capital on the Earth’s past and present.
- “Hanging by a thread,” *mixed media sculpture* Feb. 2022
The fragile state of our planet hangs by a thread. The globe, composed of fractal discards, represents Earth on the brink of ecological collapse due to rampant destruction and climatic changes. The red thread embodies the brutal exploitation of the Seven Sisters, hanging by the thread of their bloody pockets.
- “Fragments of exile: Journeys through subliminal ecologies,” *mixed media sculpture* Oct. 2022
The mundane ephemera of everyday existence transforms into profound relics of existence. The transient remnants of one week in my life unveil the hidden tapestry of geographies, political economies, labor struggles, and ecological consequences. In fragments, secrets of discarded life.
- “Plastiglomerate,” *natural sculpture* July 2019
I build upon the work of Moore, Corcoran, Jazvac, and Robertson to complete a political ecology of “plastiglomerate,” a geological conglomeration of plastic marine debris, volcanic basalt, sand, and shells first identified in Ka‘ū, Hawai‘i. Proposed as an informal marker of the Anthropocene epoch, the object symbolizes the entanglements of nature and culture. I collected and examined the material’s vitality from Kamilo Beach, exploring how it embodies the forces that shape it.
